

Application note

Subject:

**Save time and energy costs
in building with DALI-2 light
control**

Industry:

Energy and building efficiency

Product:

DLI-P360L

Customer:

System integrators and installers

CUSTOMER ISSUE

Building owners need to implement systems to monitor energy consumption while controlling lighting, to achieve the optimal energy efficiency rating for the building.

System integrators and installers need standard and solid solutions to meet this demand.

OUR SOLUTION

The DLI-P360L multi-sensors are building efficiency-oriented devices that detect the presence of people, light intensity, and measure the temperature.

They are the eyes and ears of the BEMS, when the main goal is to achieve energy savings by controlling light and temperature.

BENEFITS

- Based on the solid and reliable DALI-2 standard, the DLI-P360L PIRs are future-proof solutions, that can be managed by the UWP 4.0 controller or integrated into any DALI-2-based BEMS.
- Their multiple mounting options for either outdoor or indoor make them highly flexible to fit any use.
