Application notes

Application Note : November 2021

Market involved : Energy efficiency, Cost allocation

Product : WM15 M-Bus

Customer : System integrators, Panel builders

Subject : Energy efficiency in industrial plants

CUSTOMER ISSUE :

In industrial plants, especially in Northern Europe, water, heat and gas meters are often monitored via M-Bus communication.

To monitor the consumption of the main cabinets, for cost allocation or energy efficiency purposes, a panel mounted meter - with integrated M-Bus communication - is required. This avoids additional costs and installation of any additional gateway.

OUR SOLUTION :

The WM15 (OM version) provides real time data of power and energy via M-Bus, without the need of any additional protocol adapters.

BENEFITS :

- Embedded M-Bus port
- Fast configuration
- Lasered secondary address on front to help the commissioning of the system
